## Executive Summary

**Στην τρίτη έκδοση της μελέτης μας «Αξιολόγηση Κρατών βάσει χαρακτηριστικών ESG» παρουσιάζουμε τα βασικά ευρήματα της ανάλυσής μας.** Το μοντέλο μας περιλαμβάνει 37 δημόσια διαθέσιμες μεταβλητές για τα κράτη που αξιολογούμε βάσει περιβαλλοντικών και κοινωνικών κριτηρίων, λαμβάνοντας υπόψη και θέματα διακυβέρνησης, χρησιμοποιώντας ένα δείγμα **37** χωρών του ΟΟΣΑ (από 27 στην προηγούμενη έκδοση). Με πλήρη διαφάνεια, τυποποιούμε αυτές τις μετρήσεις ώστε να είναι συγκρίσιμες τόσο μεταξύ τομέων, όσο και διαχρονικά. Τέλος, συγκεντρώνουμε όλες τις μετρήσεις για να παρέχουμε μια συνολική κατάταξη των κρατών βάσει των κριτηρίων ESG.

Καθώς δεν υπάρχουν σημαντικές αλλαγές από έτος σε έτος στις απόλυτες κατατάξεις των κρατών, δίνουμε έμφαση στη δυναμική (δηλαδή την μεταβολή (Δ) σε σχέση με το προηγούμενο έτος) για να εντοπίσουμε τα κράτη με τις καλύτερες επιδόσεις. **Ως «κορυφαία» εντοπίζουμε τα κράτη που έχουν βαθμολογία ESG πάνω από 50 και θετική δυναμική τα τελευταία πέντε χρόνια. Τα κράτη με χαμηλές βαθμολογίες ESG και αρνητική δυναμική χαρακτηρίζονται «χαμηλών επιδόσεων».**

**Συνολικά, κατά την περίοδο 2020-2025, 27 χώρες βελτίωσαν τη βαθμολογία ESG τους, δύο παρέμειναν αμετάβλητες, ενώ οκτώ παρουσίασαν πτώση.**

Βασικά ευρήματα και αξιοσημείωτες τάσεις

**Οι χώρες της βόρειας και κεντρικής Ευρώπης** συνεχίζουν να κατατάσσονται υψηλά στο μοντέλο αξιολόγησης κρατών βάσει χαρακτηριστικών ESG, διατηρώντας το πλεονέκτημά τους όσον αφορά τις απόλυτες βαθμολογίες, **ενώ οι αναδυόμενες αγορές υστερούν.** Η πλειονότητα των αναδυόμενων χωρών βελτίωσαν σημαντικά την συνολική βαθμολογία ESG την περίοδο 2010-2020, αλλά **για την περίοδο 2020-2025, μόνο η Ινδία και η Ταϊλάνδη είχαν σημαντική καλυτέρευση στη βαθμολογία τους.**

Αξίζει να σημειωθεί ότι οι τρεις πρώτες χώρες της κατάταξης — **Σουηδία, Ελβετία και Φιλανδία** — προστέθηκαν φέτος για πρώτη φορά στη λίστα μας. Ωστόσο, η υποχώρηση της **Νορβηγίας** στην συνολική κατάταξη δεν οφείλεται αποκλειστικά στην ένταξη νέων χωρών στη σχετική λίστα αξιολόγησης, αλλά συνδέεται επίσης με τη χειροτέρευση ορισμένων βασικών δεικτών της ίδιας της χώρας. **Η Δανία, η Ιρλανδία, το Ηνωμένο Βασίλειο και η Ιαπωνία ανέβηκαν στη σχετική κατάταξη ενώ οι χώρες της Νότιας Ευρώπης διατήρησαν σε μεγάλο βαθμό την θέση τους στην συνολική κατάταξη.** Μεταξύ των χωρών με χαμηλότερες βαθμολογίες, η **Ινδία** αν και σημείωσε μεγάλη βελτίωση παραμένει σημαντικά χαμηλότερα στην κατάταξη σε σχέση με την Κίνα, την Βραζιλία και το Μεξικό.

Κορυφαίες / Χαμηλές Επιδόσεις

Για την περίοδο 2020 – 2025, **η Ιταλία, η Ελλάδα, το Ηνωμένο Βασίλειο και η Ιρλανδία ξεχωρίζουν ως «top performers».**

**Η Νορβηγία, ο Καναδάς και η Γερμανία είχαν τη χαμηλότερη δυναμική** μεταξύ των ανεπτυγμένων χωρών κατά την ίδια περίοδο, αν και διατηρούν υψηλές απόλυτες βαθμολογίες (Top performers but declining).

**Η Νότια Αφρική, η Βραζιλία και σε μικρότερο βαθμό η Κίνα παρουσίασαν σημαντική υποχώρηση της δυναμικής τους. Αντιθέτως, η Ινδία βελτίωσε τη βαθμολογία της κατά το συγκεκριμένο διάστημα,** αν και παραμένει σε συγκριτικά χαμηλότερα επίπεδα.

# Executive Summary

---

**In this third edition of our Sovereign ESG Assessment publication we present our Sovereign ESG Assessment Model's key findings.** Our model comprises 37 publicly available indicators aimed at capturing the most significant aspects of sovereign behaviour across three pillars: Environmental, Social, and Governance (E, S, and G). These metrics are standardised and normalised to ensure comparability both cross sectionally and across time and are combined **to generate an overall ESG ranking for each of the 37 countries in our universe.**

As there are typically no notable year-to-year shifts in absolute country rankings, in order to pinpoint top performers, we prioritise momentum (i.e.  $\Delta$ s relative to the previous year). **We identify as top performers the countries that have had a score above 50 and positive momentum over the past five years. Bottom performers are characterised by low ESG scores and negative momentum.**

**Overall, between 2020 and 2025, 27 countries improved their ESG scores, 2 remained unchanged, and 8 experienced declines.**

## Key findings and noticeable trends

**Northern and Central European countries continue to rank high** in our Sovereign ESG Assessment Model, maintaining their advantage in absolute scores, **whereas emerging markets lag.** Most emerging countries significantly improved their overall ESG scores during the period 2010–2020. **However, for the years 2020–2025, only India and Thailand reported notable improvements in their scores.**

It is worth noting that the top three countries in the ranking - **Sweden, Switzerland, and Finland** - were added to our list for the first time this year. However, **Norway's** drop in the overall ranking is not solely attributable to the inclusion of new countries in our universe but is also linked to deteriorations in certain key indicators. **Denmark, Ireland, the United Kingdom, and Japan** rose in the ranking, while the countries of Southern Europe largely maintained their overall positions. Among countries with lower scores, **India - despite significant improvement - remains substantially lower in the ranking compared to China, Brazil, and Mexico.**

## Top / Bottom Performers

For the period 2020 – 2025, **Italy, Greece, the United Kingdom and Ireland stand out as top performers.**

**Norway, Canada, and Germany demonstrated the lowest momentum among developed countries** during the same period, although they continue to maintain high absolute scores (top performers but declining).

**South Africa, Brazil, and to a lesser extent China, showed a significant decrease in momentum.** In contrast, **India improved its score** during this period, although it remains at comparatively lower levels.

India	32.9	India	34.7	South Africa	34.3
Pakistan	27.3	Pakistan	27.6	Pakistan	27.6

Sweden, Switzerland, and Finland retained their positions as the top three countries by score. In contrast, Norway experienced a notable decrease in its ranking.

Denmark, Ireland, the UK and Japan have moved up in their relative ESG country ranking in the past five years.

Southern European countries have largely retained their rankings.

Among countries with lower scores, Brazil and South Africa have dropped further down the list.

Northern and Central **European countries continue to rank high** in our Sovereign ESG Assessment Model, maintaining their advantage as regards absolute scores, **whereas emerging markets lag**.

Many **emerging countries** showed strong improvement in their overall ESG score in the period 2010-2020. **However, for the period 2020–2025, this progress has slowed, and in some instances, even stalled.**

Regarding country rankings, there are typically no notable year-to-year shifts. Our preference is to focus on longer-term patterns, including thus momentum in our evaluation of leading performers.

Countries with changes in their ranking		
	2024-2025	2020-2025

No change	32	21
Downgrade	2 *	8 ***
Upgrade	3 **	8 ****

\*Singapore, United States

\*\*Austria, Belgium, United Kingdom

\*\*\*Brazil, Canada, Chile, Germany, Netherlands, Norway, South Africa, USA

\*\*\*\*Denmark, Greece, India, Ireland, Japan, Thailand, United Kingdom, Vietnam

Hence, we identify **as the top performers the countries that achieved both a score above 50 and positive momentum** for the period considered.

**Bottom performers** are characterised by **low ESG scores and negative momentum**.

## Top vs Bottom Performers (2020-2025)

Top performers: **Italy, Greece, UK and Ireland** had the largest positive momentum while reaching ESG score >50.

Top performers but declining: **Norway, Canada and Germany** had the poorest momentum among developed countries **during the same period**, although their absolute scores still remain high.

Bottom performers: **South Africa, Brazil, and to a lesser extent China** saw significant declines in momentum, while having historically received ESG scores <50. **India** improved its score during the period, however it remains comparatively low.

# ESG Score Decomposition

Factor Contribution to ESG Score Δ (2020-2025)

29 out of 37 countries saw their environmental scores decline for the period 2020-2025. **Peru, Brazil, Chile, Norway and Canada** experienced the most significant negative impact from the environmental factor. However, for 21 of these countries improvements in the social and governance factors have offset this decline.

**Overall, between 2020 and 2025, 27 countries improved their ESG scores, 2 remained unchanged, and 8 experienced declines.**

ESG Score Decomposition - 2025

An examination of the ESG score breakdown reveals that the top-ranked countries have similar distributions across each pillar.

The **environmental factor is comparatively lower for Norway, Australia and the Netherlands** when benchmarked against other developed nations.

In **South Africa, the social factor** makes a **relatively smaller contribution to the overall score**, while in **Pakistan, India and China, the governance factor** demonstrates the most pronounced **weakness**.

## Output – The Environmental Pillar & its Evolution

	2010		2020		2025
Sweden	79.5	Sweden	75.3	Sweden	73.4
Switzerland	75.1	Singapore	70.7	Singapore	70.4
Finland	74.9	Luxemburg	70.0	Switzerland	69.4
Singapore	69.2	Finland	69.6	Finland	69.1
Japan	69.1	Switzerland	67.8	Luxemburg	66.6
Austria	67.4	Austria	66.8	Austria	66.1
Luxemburg	66.2	United Kingdom	65.3	United Kingdom	65.4
Denmark	66.1	Germany	64.6	Ireland	64.3
France	65.9	Denmark	64.1	Germany	63.7
Canada	65.5	Canada	63.7	Denmark	63.6

Peru	42.0	Vietnam	50.5	China	45.9
Vietnam	41.4	Thailand	48.8	Indonesia	42.7
Chile	39.8	Indonesia	47.9	Chile	42.7
Pakistan	38.3	China	47.6	Peru	42.1
China	38.0	Pakistan	37.4	Pakistan	38.0
India	33.0	India	36.3	India	35.0
South Africa	31.3	South Africa	34.5	South Africa	28.3

The Environmental Pillar presents the greatest challenge, as nations that rank highly in overall ESG scores or excel in social and governance categories often show less consistency in their environmental performance.

Countries such as **Canada, Norway and Brazil** exhibited a significant decline in their environmental score. Continued reliance on fossil fuels, deforestation and an increase in food crops as measured by the Natural Resource Depletion and Food Production Index were the main contributors to this drop.

**Ireland** achieved a notable improvement in its environmental score, primarily due to the substantial growth in its high-technology exports as a proportion of its total manufactured exports.

## Output – The Social Pillar & its Evolution

	2010		2020		2025
Norway	82.5	Switzerland	81.3	Norway	81.6
Switzerland	82.1	Norway	80.9	Netherlands	81.0
Austria	80.1	Netherlands	80.3	Switzerland	80.7
Sweden	79.9	Austria	80.1	Denmark	79.7
Netherlands	79.7	Denmark	79.4	Austria	79.6
Denmark	79.2	Germany	78.5	Cyprus	78.8

Japan	71.3	Italy	70.2	Greece	72.2
Spain	71.0	United States	69.6	Japan	71.4
United States	70.3	Greece	68.3	United States	71.2
Romania	63.8	Romania	67.3	Romania	68.9
China	62.3	China	66.0	Chile	68.5
Chile	61.9	Chile	64.0	China	65.5
Brazil	57.4	Vietnam	57.7	Vietnam	56.8
Mexico	51.6	Thailand	53.4	Brazil	52.4
Vietnam	50.6	Brazil	52.0	Mexico	52.3
Thailand	50.1	Mexico	51.3	Thailand	51.5
Peru	42.9	Indonesia	44.0	Peru	46.9
Indonesia	38.5	Peru	42.0	Indonesia	44.9
India	32.9	India	35.9	India	40.3
Pakistan	29.2	Pakistan	29.4	Pakistan	30.2
South Africa	21.7	South Africa	22.3	South Africa	21.5

Mature economies attain the highest social pillar scores as expected, as the latter have a much more integrated systems of social governance and structure.

**Ireland, Spain, Italy and Greece** each demonstrated significant progress in their social pillar scores as their unemployment and participation rates improved.

## Output – The Governance Pillar & its Evolution

	2010		2020		2025
Sweden	86.3	Norway	82.6	Denmark	84.6
Finland	84.9	Finland	81.8	Norway	83.5
Norway	83.9	Sweden	80.8	Finland	82.5
Denmark	83.7	Denmark	79.9	Sweden	81.5

Chile	61.9	Cyprus	57.5	Israel	61.5
Israel	60.0	Chile	57.4	Italy	59.7
Italy	56.8	South Africa	54.0	Cyprus	59.0
South Africa	53.5	Italy	53.7	Greece	53.6
Greece	47.8	Greece	49.8	South Africa	53.3
Brazil	43.1	Romania	46.8	Romania	49.0
Peru	43.1	Peru	42.2	Thailand	46.9
Romania	40.6	Vietnam	40.8	Peru	46.4
Thailand	39.6	Thailand	39.9	Indonesia	45.4
Mexico	39.5	Indonesia	39.9	Vietnam	42.3
Vietnam	35.1	Brazil	39.6	Mexico	40.0
China	33.5	China	39.0	Brazil	39.9
Indonesia	33.0	Mexico	36.8	China	38.1
India	32.7	India	31.7	India	36.9
Pakistan	14.4	Pakistan	16.1	Pakistan	14.6

The improvement in the governance scores for **Denmark, Australia, and Japan** can be partially attributed to their relatively stronger GDP growth, a higher proportion of women holding seats in national parliaments, and advancements in areas such as freedom of speech, freedom of association, and media independence, as reflected by the Voice and Accountability Indicator.

# Who is Top and Who is Bottom | Valuation, Income and Sovereign ESG Score

ESG Scores & Gross National Income

High-income countries, as measured by GNI per capita, tend to have a higher ESG score compared to middle-income countries.

Higher scores can lead to better access to capital markets and potentially lower borrowing costs.

Valuation & Sovereign ESG Score

Looking at valuations and the ESG scores, countries that are assigned high scores also have the lowest CDS spreads, signalling that mature markets, as expected, are less risky.

  - Country Focus – Greece
  - Descriptives & Methodology
  - Appendix  
37 Countries & their 2020 37 variables

# Country Focus: Greece

Evolution of ESG Score 2020-2025

Factor	2020	2025	Δ(2025-2020)
Enviromental	53.32	53.36	0.05
Social	68.32	72.18	3.86
Governance	49.83	53.58	3.75

Greece’s social and governance scores have improved over the past 5 years with the social pillar peaking in 2025. This trend is primarily attributed to a decline in the unemployment rate and Greece’s GDP growth.

However, environmental challenges persist. Although there have been moderate improvements in CO2 emissions, the country’s vulnerability to climate change and its readiness to adapt (Gain Index) and has progressed in high-technology exports, minimal advancement has been noted in the protection of terrestrial and marine threatened areas as well as in water productivity, indicating persistent inefficiency in water usage. Furthermore, during this period, R&D expenditure has declined.

Greece’s improving ESG Score vs Southern European peers

Greece has shown notable improvement in its ESG score from 2020 to 2025, achieving the second highest momentum among all advanced economies, surpassed only by Italy.

In recent years, Greece’s momentum is slightly higher than its peer average, resulting in gradual but sustained convergence.

# Country Focus: Greece

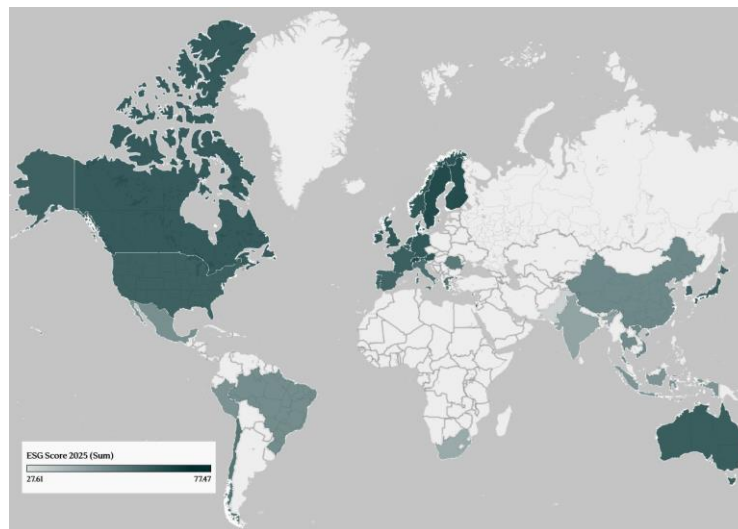

Note: Momentum, Δ 2020-2025 (all values are standardized)  
Δ 2020-2025 Real GDP growth, Unemployment Rate & Net Migration are not shown in the chart

### Universe

In our first Sovereign ESG Assessment Model publication, the original selection of countries was mandated by the need to have a representative pool of developed and developing economies of a size that has already allowed them practicing ESG principles.

In our Second Update last year we added **3** countries: Luxembourg, Israel and Romania.

This year we have included **10** more countries (Australia, Chile, Finland, Ireland, Pakistan, Peru, Sweden, Switzerland, Thailand, and Vietnam).

The final number of countries selected to construct Piraeus' Sovereign ESG Scoring Model is now **37**. Our aim is to keep on adding to our universe as more reliable ESG data become available.

### Time Span

**37** indicators were used, enabling the comparison of the ESG related domestic risks and opportunities at country level.

3 variable adjustments made to correct for biases:

- Net migration (level) divided by Total Population
- Food Production Index rebased to 2007 for better comparison
- Population over 65 years replaced with Age Dependency Ratio

Approx. same number of indicators per each Pillar

33.33% weight across Environmental, Social and Governance Pillars

# Indicator Definitions - Environmental

Environment	Indicator	Description
	1 <b>Adjusted Savings, Natural Resources Depletion:</b> % of GNI	Natural resource depletion is the sum of net forest depletion, energy depletion, and mineral depletion. Net forest depletion is unit resource rents times the excess of roundwood harvest over natural growth. Energy depletion is the ratio of the value of the stock of energy resources to the remaining reserve lifetime. It covers coal, crude oil, and natural gas. Mineral depletion is the ratio of the value of the stock of mineral resources to the remaining reserve lifetime). It covers tin, gold, lead, zinc, iron, copper, nickel, silver, bauxite, and phosphate.
	2 <b>CO2 Emissions:</b> KG per PPP \$ of GDP	Carbon dioxide emissions are those stemming from the burning of fossil fuels and the manufacture of cement. They include carbon dioxide produced during consumption of solid, liquid, and gas fuels and gas flaring.
	3 <b>PM2.5 Air Pollution:</b> mean annual exposure micrograms per cubic meter	Population-weighted exposure to ambient PM2.5 pollution is defined as the average level of exposure of a nation's population to concentrations of suspended particles measuring less than 2.5 microns in aerodynamic diameter, which are capable of penetrating deep into the respiratory tract and causing severe health damage. Exposure is calculated by weighting mean annual concentrations of PM2.5 by population in both urban and rural areas.
	4 <b>Forest Area:</b> % of Land Area	Forest area is land under natural or planted stands of trees of at least 5 meters in situ, whether productive or not, and excludes tree stands in agricultural production systems (for example, in fruit plantations and agroforestry systems) and trees in urban parks and gardens.
	5 <b>Global Adaptation Index (Gain Index)</b>	The Notre Dame-Global Adaptation Index (ND-GAIN) Country Index is a free opensource index that shows a country's current vulnerability to climate disruptions. It also assesses a country's readiness to leverage private and public sector investment for adaptive actions. ND-GAIN is computed through the following formula: (Readiness Indicators - Vulnerability Indicators + 1) x 50 = GAIN INDEX. It is a number from (0.0 - 100.0) range. Higher is better.
	6 <b>Terrestrial &amp; Marine Protected Areas:</b> % of total territorial area	Terrestrial protected areas are totally or partially protected areas of at least 1,000 hectares that are designated by national authorities as scientific reserves with limited public access, national parks, natural monuments, nature reserves or wildlife sanctuaries, protected landscapes, and areas managed mainly for sustainable use. Marine protected areas are areas of intertidal or subtidal terrain--and overlying water and associated flora and fauna and historical and cultural features-- that have been reserved by law or other effective means to protect part or all of the enclosed environment. Sites protected under local or provincial law are excluded.
	7 <b>Agricultural Land:</b> % of total land area	Agricultural land refers to the share of land area that is arable, under permanent crops, and under permanent pastures. Arable land includes land defined by the FAO as land under temporary crops (double-cropped areas are counted once), temporary meadows for mowing or for pasture, land under market or kitchen gardens, and land temporarily fallow. Land abandoned as a result of shifting cultivation is excluded. Land under permanent crops is land cultivated with crops that occupy the land for long periods and need not be replanted after each harvest, such as cocoa, coffee, and rubber. This category includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber. Permanent pasture is land used for five or more years for forage, including natural and cultivated crops.
	8 <b>Food Production Index:</b> 2007=100	Food production index covers food crops that are considered edible and that contain nutrients. Coffee and tea are excluded because, although edible, they have no nutritive value.
	9 <b>Total Natural Resources Rents:</b> % GDP	Total natural resources rents are the sum of oil rents, natural gas rents, coal rents (hard and soft), mineral rents, and forest rents.
	10 <b>Population Density:</b> People per sq.km of land area	Population density is midyear population divided by land area in square kilometers. Population is based on the de facto definition of population, which counts all residents regardless of legal status or citizenship--except for refugees not permanently settled in the country of asylum, who are generally considered part of the population of their country of origin. Land area is a country's total area, excluding area under inland water bodies, national claims to continental shelf, and exclusive economic zones. In most cases the definition of inland water bodies includes major rivers and lakes.
	11 <b>R&amp;D Expenditure:</b> % GDP	Gross domestic expenditures on research and development (R&D), expressed as a percent of GDP. They include both capital and current expenditures in the four main sectors: Business enterprise, Government, Higher education and Private non-profit. R&D covers basic research, applied research, and experimental development.
	12 <b>High-Technology Exports:</b> % of manufactured exports	High-technology exports are products with high R&D intensity, such as in aerospace, computers, pharmaceuticals, scientific instruments, and electrical machinery.
	13 <b>Water Productivity:</b> constant prices 2015 US\$ GDP/M3 of fresh water withdrawal	Water productivity is calculated as GDP in constant prices divided by annual total water withdrawal.

# Indicator Definitions - Social

Social	1	<b>Unemployment Rate:</b> % of total labour force, modeled ILO estimate	As defined by the International Labour Organization, unemployed workers are those who are currently not working but are willing and able to work for pay, currently available to work, and have actively searched for work.
	2	<b>Life Expectancy at birth:</b> total in years	Life expectancy at birth indicates the number of years a newborn infant would live if prevailing patterns of mortality at the time of its birth were to stay the same throughout its life.
	3	<b>Adolescent Fertility Rate:</b> births per 1000 women ages 15-19	Adolescent fertility rate is the number of births per 1,000 women ages 15-19.
	4	<b>Mortality Rate under 5 years:</b> per 1000 live births	Under-five mortality rate is the probability per 1,000 that a newborn baby will die before reaching age five, if subject to age-specific mortality rates of the specified year.
	5	<b>Prevalence of Undernourishment:</b> % of population	Population below minimum level of dietary energy consumption (also referred to as prevalence of undernourishment) shows the percentage of the population whose food intake is insufficient to meet dietary energy requirements continuously. Data showing as 5 may signify a prevalence of undernourishment below 5%.
	6	<b>Labour Force Participation Rate:</b> Total, % of total population ages 15-64, modeled ILO Estimate	Labor force participation rate is the proportion of the population ages 15-64 that is economically active: all people who supply labor for the production of goods and services during a specified period.
	7	<b>Fertility Rate:</b> Total births per woman	Total fertility rate represents the number of children that would be born to a woman if she were to live to the end of her childbearing years and bear children in accordance with age-specific fertility rates of the specified year.
	8	<b>Age Dependency Ratio:</b> % of working-age population	Age dependency ratio is the ratio of dependents--people younger than 15 or older than 64--to the working-age population--those ages 15-64. Data are shown as the proportion of dependents per 100 working-age population.
	9	<b>Cause of death by communicable diseases &amp; maternal, prenatal, nutrition conditions:</b> % of total	Cause of death refers to the share of all deaths for all ages by underlying causes. Communicable diseases and maternal, prenatal and nutrition conditions include infectious and parasitic diseases, respiratory infections, and nutritional deficiencies such as underweight and stunting.
	10	<b>Access to Clean Fuels &amp; Technologies for Cooking:</b> % of population	According to World Health Organization the following fuels and technologies are known to be clean for health at point of use and are categorized as clean for PM and CO household emissions: solar, electric, biogas, natural gas, liquefied petroleum gas (LPG), and alcohol fuels including ethanol.
	11	<b>Gini Index</b>	Gini index measures the extent to which the distribution of income (or, in some cases, consumption expenditure) among individuals or households within an economy deviates from a perfectly equal distribution. A Lorenz curve plots the cumulative percentages of total income received against the cumulative number of recipients, starting with the poorest individual or household. The Gini index measures the area between the Lorenz curve and a hypothetical line of absolute equality, expressed as a percentage of the maximum area under the line. Thus a Gini index of 0 represents perfect equality, while an index of 100 implies perfect inequality.
	12	<b>Physicians:</b> per 1000 people	Physicians include generalist and specialist medical practitioners.

# Indicator Definitions - Governance

Governance	1	<b>Regulatory Quality:</b> Estimate of Governance	Regulatory quality captures perceptions of the ability of the government to formulate and implement sound policies and regulations that. permit and promote private sector development.
	2	<b>Government Effectiveness:</b> Estimate of Governance	Government Effectiveness captures perceptions of the quality of public services, the quality of the civil service and the degree of its independence from political pressures, the quality of policy formulation and implementation, and the credibility of the government's commitment to such policies. Estimate gives the country's score on the aggregate indicator, in units of a standard normal distribution, i.e. ranging from approximately -2.5 to 2.5.
	3	<b>Voice &amp; Accountability:</b> Estimate of Governance	Voice and Accountability captures perceptions of the extent to which a country's citizens are able to participate in selecting their government, as well as freedom of expression, freedom of association, and a free media.
	4	<b>Rule of Law:</b> Estimate of Governance	ule of law captures perceptions of the extent to which agents have confidence in and abide by the rules of society, and in particular the. quality of contract enforcement, property rights, the police, and the courts, as well as the likelihood of crime and violence.
	5	<b>Control of Corruption:</b> Estimate of Governance	This indicator measures the extent to which public power is exercised for private gain, including both petty and grand forms of corruption, as well as "capture" of the state by elites and private interests.
	6	<b>Political Stability and Absence of Violence/Terrorism:</b> Estimate of Governance	Political Stability and Absence of Violence/Terrorism measures perceptions of the likelihood of political instability and/or politically-motivated violence, including terrorism.
	7	<b>Ratio of Female to Male Labor Participation Rate:</b> %, modeled ILO Estimate	Labor force participation rate is the proportion of the population ages 15 and older that is economically active: all people who supply labor for the production of goods and services during a specified period. Ratio of female to male labor force participation rate is calculated by dividing female labor force participation rate by male labor force participation rate and multiplying by 100.
	8	<b>Proportion of Seats held by Women in National Parliaments:</b> %	Women in parliaments are the percentage of parliamentary seats in a single or lower chamber held by women.
	9	<b>Individuals using the Internet:</b> % of population	Internet users are individuals who have used the Internet (from any location) in the last 12 months. Internet can be used via a computer, mobile phone, personal digital assistant, games machine, digital TV etc
	10	<b>Net Migration:</b> % over total Population	Net migration is the net total of migrants during the period, that is, the total number of immigrants less the annual number of emigrants, including both citizens and noncitizens. Data are five-year estimates.
	11	<b>Real GDP growth:</b> annual %	Annual percentages of constant price GDP are year-on-year changes. Expenditure-based GDP is total final expenditures at purchasers' prices (including the f.o.b. value of exports of goods and services), less the f.o.b. value of imports of goods and services.
	12	<b>Democracy Index</b>	EIU's Democracy Index provides a snapshot of the state of democracy in 165 independent states and two territories.

# ESG Index Construction Approach

---

- Our approach consists of two main steps: first, we identify those variables and countries where adequate data are provided and clean the resulting datasets of outliers; second, we proceed with an appropriate scheme for variable standardisation and index aggregation.
- Missing Data: In cases where past data points are unavailable, we populate missing values using linear interpolation techniques where appropriate. Moreover, due to the lagged reporting for the majority of the indicators employed to construct the index, we populate the missing values up to the current year with the last available realisation of each specific indicator.
- Outliers Treatment: Due to the diverse set of countries, it is highly possible that outliers cloud the ranking obtained via standardisation. To this end we remove outliers through winsorisation by replacing those sample points where their distance from the median is greater or lower than three times their interquartile range. The interquartile range is also used to determine the upper and lower bounds that replace the outlier values.
- Indicator Weighting System: To ensure that no individual pillars are overrepresented when constructing each country's overall score index, we apply an equal weights scheme firstly across pillars and then across indicators in each individual pillar. For example, the Environmental Pillar takes a weight of  $(100\% / 3 = 33.3\%)$ , which in turn is divided between the indicators under each pillar. In a similar manner we proceed with the next two pillars. Finally, we adjust the weighting scheme for missing values especially in the early sample period of our dataset. Note that since in each pillar we consider roughly the same number of indicators, equal weighting is also employed for the construction of the factors.

## ESG Index Standardisation and Aggregation

---

We standardise all variables using the Distance-to-Frontier methodology, where each variable is forced to lie within a range from a maximum and a minimum value. If the min|max for each variable, i.e. GDP growth, is selected separately for each country across a number of years, then the model could be used only for a single-country time-series comparisons. If, on the other hand, min|max are selected across a number of countries at a single point in time, then our model could be used for cross-sectional comparisons only.

In our case, our approach is based on min|max across all countries, as well as on a recursively expanding time window where the computation proceeds using only data available up to the year that the calculation takes place. In this way, our index may be considered as a semi-real-time indicator taking into account data availability (but not data revisions).

More formally, let  $X_i$  denote the indicator of interest, then the standardised score index,  $S_i$ , is given by the following linear transformation:

$$S_i = 100 \times \left( \frac{X_i - X_{min}}{X_{max} - X_{min}} \right) \quad \text{if an increase in } X_i \text{ implies a positive impact of the variable on ESG score}$$

or

$$S_i = 100 \times \left( \frac{X_{max} - X_i}{X_{max} - X_{min}} \right) \quad \text{if an increase in } X_i \text{ implies a negative impact of the variable on ESG score}$$

where  $X_{max}$  and  $X_{min}$  are computed across both the country and time dimension of the dataset for each year up to date

Clearly, the functional form provides a measure of the gap between a country's indicator and its best realisation ( $X_{max}$  and  $X_{min}$ ) taking values in the range of 0 to 100. It is important to emphasise that the score index does not depend on parameters (e.g. mean or standard deviation) that may be imprecisely estimated especially under limited data availability.

## ESG Index Standardization and Aggregation

---

As a next step we aggregate the standardised series for each country across the three pillars (E-S-G) using an equal weighting scheme. By construction, the resulting index takes values in the  $[0,100]$  interval with the highest score indicating a better reading. After aggregating each country's indicators into three factors, the final step is to aggregate each country's factor score into a composite equal-weighted ESG index.

## ESG Indicators - Impact Per Pillar

Environment			Social		
Indicators	Impact	Weights	Indicators	Impact	Weights
<b>Adjusted Savings, Natural Resources Depletion:</b> % of GNI	Negative	2.56%	<b>Unemployment Rate:</b> % of total labour force, modeled ILO estimate	Negative	2.78%
<b>Forest Area:</b> % of Land Area	Positive	2.56%	<b>Life Expectancy at birth:</b> total in years	Positive	2.78%
<b>CO2 Emissions:</b> KG per PPP \$ of GDP	Negative	2.56%	<b>Adolescent Fertility Rate:</b> births per 1000 women ages 15-19	Negative	2.78%
<b>PM2.5 Air Pollution:</b> mean annual exposure micrograms per cubic meter	Negative	2.56%	<b>Mortality Rate under 5 years:</b> per 1000 live births	Negative	2.78%
<b>Global Adaptation Index (Gain Index)</b>	Positive	2.56%	<b>Prevalence of Undernourishment:</b> % of population	Negative	2.78%
<b>Terrestrial &amp; Marine Protected Areas:</b> % of total territorial area	Positive	2.56%	<b>Labour Force Participation Rate:</b> Total, % of total population ages 15-64, modeled ILO Estimate	Positive	2.78%
<b>Agricultural Land:</b> % of Total land area	Negative	2.56%	<b>Fertility Rate:</b> Total births per woman	Positive	2.78%
<b>Food Production Index:</b> 2007=100	Positive	2.56%	<b>Age Dependency Ratio:</b> % of working-age population	Negative	2.78%
<b>Total Natural Resources Rents:</b> % GDP	Negative	2.56%	<b>Cause of death by communicable diseases &amp; maternal, prenatal, nutrition conditions:</b> % of total	Negative	2.78%
<b>Population Density:</b> People per sq.km of land area	Negative	2.56%	<b>Access to Clean Fuels &amp; Technologies for Cooking:</b> % of population	Positive	2.78%
<b>R&amp;D Expenditure:</b> % GDP	Positive	2.56%	<b>Gini Index</b>	Negative	2.78%
<b>High-Technology Exports:</b> % of manufactured exports	Positive	2.56%	<b>Physicians:</b> per 1000 people	Positive	2.78%
<b>Water Productivity:</b> constant prices 2015 US\$ GDP/M3 of fresh water withdrawal	Positive	2.56%			

Governance		
Indicators	Impact	Weights
<b>Regulatory Quality:</b> Estimate of Governance	Positive	2.78%
<b>Government Effectiveness:</b> Estimate of Governance	Positive	2.78%
<b>Voice &amp; Accountability:</b> Estimate of Governance	Positive	2.78%
<b>Rule of Law:</b> Estimate of Governance	Positive	2.78%
<b>Control of Corruption:</b> Estimate of Governance	Positive	2.78%
<b>Political Stability and Absence of Violence/Terrorism:</b> Estimate of Governance	Positive	2.78%
<b>Ratio of Female to Male Labor Participation Rate:</b> %, modeled ILO Estimate	Positive	2.78%
<b>Proportion of Seats held by Women in National Parliaments:</b> %	Positive	2.78%
<b>Net Migration:</b> % over Total Population	Positive	2.78%
<b>Real GDP growth:</b> annual %	Positive	2.78%
<b>Individuals using the Internet:</b> % of population	Positive	2.78%
<b>Democracy Index</b>	Positive	2.78%

- Each variable/indicator is characterised to have a **positive** or **negative impact** on the ESG score index, thus affecting the standardisation as well.
- Challenges we had to resolve involved variables with potentially mixed signals (see Appendix for a detailed definition).  
Some examples include:
  - Agricultural Land
  - Food Production Index
  - Total Natural Resources – contribution to GDP

- 
- Executive Summary
  - Sovereign ESG Assessment
  - Country Focus – Greece
  - Descriptives & Methodology
  - **Appendix**  
37 Countries & their 2020 37 variables

	Indicator	2020 Actual	2020 Standardized	Δ 2020-2025	Δ 2024-2025

**Disclaimer:** This document is produced by the Economic Research & Investment Strategy Department of Piraeus Bank (hereinafter “the Bank”), which is supervised by the European Central Bank (ECB), in collaboration with the Bank of Greece and is sent or provided to third parties, without any obligation of its author. This document or any part of it should not be duplicated in any way without the prior written consent of its author.

The information or opinions included in this document are addressed to existing or potential clients in a general manner, without taking into account the particular circumstances, the investment objectives, the financial ability, the experience and/or knowledge of the potential recipients of this document and, as a result, they do not constitute or should not be considered neither as a solicitation or offer for the conduct of transactions in financial instruments or currencies nor as a recommendation or advice for decision making in relation to those. Taking into account the aforementioned, the recipient of the information contained in this document should proceed with his/her own research, analysis, and confirmation of the information which is included in this document and seek for independent and professional legal, tax and investment advice, before proceeding with any investment decision making.

The information depicted in this document is relied on sources that the Bank considers to be reliable and is provided on an “as is” basis, however, the Bank cannot warrant as to their accuracy and completeness. The opinions and estimates herein are related to the trend of the local and international financial markets at the indicated date (prices at closing time) and are subject to changes without any prior notice. Notwithstanding the above, the Bank might include in this document investment researches, which have been conducted by third persons. In this case, the Bank does not modify those researches, but it presents them on an “as is” basis, therefore, no responsibility is assumed in relation to the content of the aforementioned investment researches. The Bank is under no duty to update the information contained in this document. Considering the above, the Bank, the members of its Board of Directors and the relevant persons assume no responsibility for the information included in the present document and/or for the outcome of any investment decisions made according to such information.

Piraeus Bank Group is an organization with a significant presence in the Greek market and an increasing one in the international markets providing a wide range of investment services. In the context of investment services offered by the Bank and/or any other Piraeus Group companies in general, there might be cases whereby conflict of interests may arise in relation to the information provided herein. Reference should be made to the fact that the Bank, the relevant persons and/or other Piraeus Group companies indicatively:

Are not subject to any prohibition in relation to trading on own account or in the course of providing portfolio management services prior to the publication of this document or the acquisition of any shares prior to any public offering or the acquisition of any other securities.

May offer upon remuneration investment banking services to issuers for whom this document may contain information.

May participate to the issuers’ share capital or acquire other securities issued by the aforementioned issuers or attract other financial interests from them.

Might provide market making or underwriting services to issuers that might be mentioned in this document.

Might have published papers the content of which is different or incompatible to the information presented herein.

The Bank as well as the other Piraeus Group's companies have enacted, implement and maintain an effective policy, which prevents circumstances that may give rise to conflicts of interests and the dissemination of any information among the departments (“chinese walls”) and they also constantly comply with the provisions and regulations relevant to inside information and market abuse. Also, the Bank confirms that it doesn’t have any kind of interest or conflict of interest with a) any other legal entity or person that could have participated in the preparation of the present document and b) with any other legal entity or person that couldn’t have participated in the preparation of the present document, but had access to it before its publication.

It is duly stated that: the investments described in the present document include investment risks, among which the risk of losing the entire capital invested. In particular, it is stated that;

The figures presented herein refer to the past and that the past performance is not a reliable indicator of future performance.

In case the figures refer to simulated past performance, that past performance is not a reliable indicator of future performance.

The return on investments might be positively or negatively affected as a result of currency fluctuations, in case the figures are denominated in a foreign currency (other than Euro).

Any forecasts in relation to future performance, may not be a reliable indicator of future performance.

The tax treatment of the information as well as transactions pertained in this document, depends on each investor's individual circumstances and may be subject to change in the future. As a result, the recipient should seek for independent advice in relation to the applicable tax legislation.

The distribution of the present document outside Greece and/or to persons governed by foreign law may be subject to restrictions or prohibitions according to the applicable legislation. Therefore, the recipient of the present should seek for independent advice in relation to the applicable legislation, in order to look into such restrictions and/or prohibitions.
